The 2-way full range TLX84 is a compact biamped dual 8" 1,800-Watt line array element that is ideally suited to a broad range of speech and music sound reinforcement applications in fixed installation, portable and touring audio systems. The TLX84 is designed to work in conjunction with LAKE DSP and LAB GRUPPEN amplification, providing optimal FOH performance, as well as offering considerable flexibility to readily adapt to varying venue requirements.

Custom-Engineered Drivers
TURBOSOUND is recognised the world over for designing and building some of the most iconic loudspeakers and subwoofers. We take meticulous care and pride in maintaining that reputation by utilising only drivers designed specifically for each application – it's what sets us apart from the competition.

Featuring two 8" low frequency drivers with weather resistant cones and two 1" titanium dome copper clad aluminium coil compression drivers, the TLX84 delivers unparalleled clarity and intelligibility in a compact enclosure that belies its impressive performance. Due to its broad 100° horizontal by 10° vertical dispersion pattern, the TLX84 provides exceptional coverage in wide rooms and in distributed fill applications.

Construction and Connectivity

An integral suspension system engineered to meet BGV-C1 specifications is provided for suspending or ground stacking multiple TLX84 elements with a 10:1 safety factor. Designed for speed and simplicity of use, custom-engineered flybars and road cases are available as separate accessories. The companion TLX215L dual 15" subwoofer is specifically designed for use with TLX84, providing additional low frequency extension and substantial impact for more demanding sound reinforcement applications. Finished in hard wearing semi matt black paint, the cabinet is constructed from 15 mm (5/8") birch plywood and includes a rugged powder coated perforated steel mesh grille backed with reticulated foam. The rear panel connector plate carries Neutrik speakON® NL4 connectors for input and link connections to additional enclosures.

Acoustic Simulation Tools

EASE GLL files are provided for EASE Focus Acoustic Simulation Software, which is available for free download. This allows accurate calculation of both acoustic coverage and suspension pick point selection for tilting and aiming the array at the desired angle.

You Are Covered

We always strive to provide the best possible Customer Experience. Our products are made in our own MUSIC Tribe factory using state-of-the-art automation, enhanced production workflows and quality assurance labs with the most sophisticated test equipment available in the world. As a result, we have one of the lowest product failure rates in the industry, and we confidently back it up with a generous Warranty program.

Mounting and Rigging

**Safety Warning:** Only authorised and certified personnel shall design and install suspended or ground stack configurations, following the instructions and procedures in the TLX84-FLB rigging manual supplied with the TLX84-FLB flybar, or downloaded from turbosound.com. Failure to follow these instructions may lead to death or permanent injury. For maximum array sizes, weights and working load limits, please consult the TLX84-FLB rigging manual.

The TLX84 cabinet has drop down mounting links on the bottom, and slots and mounting holes on the top. The various mounting points allow the TLX84-FLB flybar to be attached to the top of the TLX84 cabinet, and allows TLX84 cabinets to be joined together, and connected above or below the TLX215L subwoofer. The angle of the TLX84 cabinet can be varied by choosing 1 of 7 rear mounting holes to select 0 to 6 degree inter-cabinet angles in 1 degree increments. Rigging pins are provided to secure the TLX84 cabinets, TLX215L subwoofer, and TLX84-FLB flybar together.

- An array of 8 TLX84 cabinets attached to a TLX84-FLB flybar
- Mixed array with a TLX84-FLB flybar, TLX215L subwoofer, and 4 TLX84 cabinets
- Mixed array ground stack with a TLX215L subwoofer, and 4 TLX84 cabinets

Dual 2 Way 8” Line Array Element for Portable and Fixed Installation Applications

Architecture & Engineering Specifications

The loudspeaker shall be of the two-way bi-amp passive type consisting of two 8” (203 mm) LF drivers and two 1” (25.4 mm) HF compression drivers. Performance specifications of a typical production unit shall meet or exceed the following: frequency response, measured with swept sine wave input, shall be flat within ±3 dB from 67 Hz to 20 kHz and within -10 dB from 58 Hz to 20 kHz. Nominal dispersion, at -6 dB points, shall average 100° H x 10° V. Nominal impedance shall be HF: 16 Ohms, LF: 16 Ohms. Power handling shall be HF: 60 Watts continuous, 240 Watts peak, LF: 450 Watts continuous, 1,800 Watts peak. Sensitivity, measured on axis, mean averaged over the stated bandwidth, shall be HF: 101 dB, 1 Watt @ 1 metre, LF: 94 dB, 1 Watt @ 1 metre. Maximum SPL (peak), measured at 1 metre with music program at stated amplifier input, shall be HF: 125 dB, LF: 127 dB. Dimensions: 245 mm high x 801 mm wide x 485 mm deep (9.6” x 31.5” x 19.1”). Net weight: 27.9 kg (61.4 lbs). The loudspeaker system shall be the TURBOSOUND TLX84. No other loudspeaker shall be acceptable unless submitted data from an independent test laboratory verifies that the above combined performance / size specifications are equaled or exceeded.
